

O'MAHONY & MYER

ELECTRICAL ENGINEERING & LIGHTING DESIGN

SUSTAINABLE DESIGN PROJECTS

O'Mahony & Myer is a 25-person electrical engineering and lighting design firm based in San Rafael, California. Founded in 1979, the firm provides full service electrical engineering and lighting design services to architects, engineers, interior designers and building owners and specializes in commercial, civic, educational and institutional facilities. At O'Mahony & Myer we have been applying the principles and strategies of "sustainable design" for years, sharing a commitment with our clients to always minimize energy consumption and reduce overall energy costs. We are recognized as experts at controlling light pollution and light trespass in all installations and most especially in projects with extensive site lighting requirements. Our designs have helped make "good neighbors" of our end-users and building owners for the past three decades. The following list of projects includes projects that have earned LEED® Certification, projects that are Registered for LEED® Certification with the USGBC, projects that are intended to pursue LEED® Certification, and projects that are designed to meet LEED® Certification criteria, while the building owner has decided against applying for official LEED® Certification.
